Sandalwood oils

A number of people have told me why it has the logo at the top of my homepage. "The site is full of nonsense about sandalwood is nonsense." I have responded to these questions via email and in-depth articles. Here are my reasons for not using any sandalwood at all.

You can find articles on aromatherapy-type websites and books that give good information on sandalwood. They contain quite accurate information. However, some of their texts are rather outdated and they are not necessarily up-to-date. As a result, they may not be as accurate as the information that I have given you. Therefore, I prefer to use high-quality research articles to guide me in my work.

Another example is in the context of the use of sandalwood oil. There are many sandalwood varieties which yield essential oils with such different chemical profiles that you can only use them for specific purposes.

A number of people have asked me why I have the logo at the top of my homepage. I have responded to those questions via email and in-depth articles. Here are my reasons for not using any sandalwood at all.

amt of the oil is stable, but is not suitable for aromatherapy. The use of sandalwood oil as herbal preparations but not the essential oil. This is because the indigenous people of Australia have used sandalwood oil for centuries. However, when you examine the therapeutic claims frequently made for oils of Santalum album, you realize that it is not true. Then they make claims based on these isomers occurrence in Santalum album. Jirovetz, Leopold et al. 2005. Flavour and Fragrance Journal. 21. 465 – 468.

This base is a synthetic sandalwood oil. It reproduces the extremely fine, powerful, rich and sweet sandalwood odour. It is a complex mixture of captive and natural ingredients.

This base is made up of 22 ingredients including 5 naturals, one of which is 100% Mysore oil and may contain synthetic fragrance chemicals.

When you examine the therapeutic claims frequently made for oils of Santalum album, you realize that it is not true. Then they make claims based on these isomers occurrence in Santalum album. Jirovetz, Leopold et al. 2005. Flavour and Fragrance Journal. 21. 465 – 468.

They are trying to establish sandalwood plantations in the Vanuatu island group, but when those plantations will be producing good quality oil is not clear at the moment.

Tests. For example,
